

ABSTRACT OF THE DISCLOSURE

- Systems and methods for error handling are disclosed. The systems and methods may be utilized for single or multiple processor computer systems to handle errors in a coordinated manner between hardware and any firmware or software layers.
- A computer system includes a non volatile memory and at least one processor. A
- 5 firmware error handling routine is stored on the non volatile memory. The firmware error handling routine is for handling errors. Each of the at least one processors detects errors. Each processor executes the firmware error handling routine on detecting an error. The executed firmware error handling routine handles the error. The executed firmware error handling routine also logs error information to a log.
- 10 The systems and methods provide for coordinated error handling that enhance error recovery, provide error containment and maintain system availability.
